

NO Change = NO Internet

WEDNESDAY, 18 MAY 2016

BYOD devices will need to manually authenticate to the Secure Proxy to access Internet services. The device's browser should preferably be set to point to the new FIB PAC file for proxy – <http://pac.det.nsw.edu.au/fib/proxy.pac> or configured for automatic proxy. If the device can only accept a manual proxy, it should be set to proxy.det.nsw.edu.au on port 8080.

Personal BYO devices, Apple Macs, and school-owned non-Windows devices will prompt for credentials when trying to access the Internet. When prompted, remember to add @detnsw to your User ID

e.g. first.lastname@detnsw

What You Need to Do...

- Turn off the manual proxy and Turn on the auto config for all devices **WINDOWS** • **MAC** • **IPAD** • **ANDROID**
- Sign in with *User.name@detnsw* for Internet access.
